The major objective of this book was to identify issues related to the introduction of new materials and the effects that advanced materials will have on the durability and technical risk of future civil aircraft throughout their service life. The committee investigated the new materials and structural concepts that are likely to be incorporated into next generation commercial aircraft and the factors influencing application decisions. Based on these predictions, the committee attempted to identify the design, characterization, monitoring, and maintenance issues that are critical for the introduction of advanced materials and structural concepts into future aircraft.

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

El presente texto detalla el funcionamiento de los sistemas eminentemente el éctricos y electr ónicos (de avi ónica) de las aeronaves, así como los métodos de mantenimiento de estos. De esta forma, resulta una obra especialmente práctica para el aspirante a Técnico de Mantenimiento Aeromecánico, que deberá dominar los contenidos incluidos para desempeñar su trabajo

adecuadamente y, por tanto, desarrollarse laboralmente. La obra está completamente adaptada a los contenidos del Módulo 11A (Aerodinámica, estructuras y sistemas de aviones de turbina) de la parte 66 del Reglamento (CE) 1321/2014, por lo que resulta ideal para la obtención de las licencias de Técnico de Mantenimiento de Aeronaves EASA LMA B1.1 (Avión con motor de turbina), ya que trata cada apartado con la profundidad adecuada. Además, el texto cuenta con numerosas y variadas preguntas de autoevaluación al final de cada unidad y una batería de 640 preguntas de tipo test, muy similares a las que el aspirante a técnico se va a encontrar en el examen de la licencia. Cabe destacar que este libro se ajusta totalmente al módulo de Aerodinámica, estructuras y sistemas eléctricos y de aviónica de aviones con motor de turbina, del Ciclo Formativo de grado superior en Mantenimiento Aeromecánico de Aviones con Motor de Turbina. Además, su contenido es suficientemente amplio, por lo que será de gran utilidad para el estudio de los sistemas eléctricos y de aviónica de helicópteros y de aviones con motor de pistón. Por último, la obra está completamente ilustrada con figuras, imágenes y esquemas que facilitan la comprensión de los contenidos y sirven de valioso apoyo para la obtención de la licencia de Técnico de Mantenimiento de Aeronaves. El autor, ingeniero aeronáutico por la Universidad Politécnica de Madrid, cuenta con más de quince años de experiencia en la formación de técnicos de mantenimiento aeromecánico. Ha publicado, también en esta editorial, los libros Módulo 1 (Matemáticas), Módulo 2 (Física), Módulo 3 (Fundamentos de Electricidad), Módulo 4 (Fundamentos de Electrónica), Módulo 5 (Técnicas digitales. Sistemas de instrumentos electrónicos) y Módulo 17 (Hélices).
