Communication Management

AAC stands for Augmentative and Alternative Communication (AAC). It is any form of communication which helps (augmentative) or replaces (alternative) speech. AAC includes simple systems such as pictures, gestures and pointing, as well as more complex techniques involving powerful computer technology. Please refer to our glossary that describes wide range of techniques, systems and approaches used to support or replace spoken communication.

Augmentative and Alternative  
Communication: Management of ...

Augmentative and alternative communication is typically much slower than speech, with users generally producing 8–10 words per minute. Rate enhancement strategies can increase the user's rate of output to around 12–15 words per minute, and as a result enhance the efficiency of communication. There are two main options for increasing the rate of communication: encoding and prediction.

## Augmentative and Alternative Communication Devices.

AAC stands for Augmentative and Alternative Communication. It is the term used to describe the different types of communication we use alongside or in place of natural speech. Facial expression, body language, pointing, gestures and signs are all forms of AAC. These are known as unaided communication as they do not require any additional aids.
