international project in the frame of ERASMUS+ funded by the European Union. The project aims to exchange interdisciplinary knowledge in the fields of economics and geomatics. For the newly introduced courses, interdisciplinary learning materials have been developed by a team of lecturers from four different universities in three countries. In a first study block, students were taught methods from the two main research fields. Afterwards, the knowledge gained had to be applied in a project. For this international project, teams were formed, consisting of one student from each university participating in the project. The achieved results were presented in a summer school a few months later. At this event, more methodological knowledge was imparted to prepare students for a final simulation game

today's dynamic business climate. It uses value creation and resource-based sustainability as central integrating concepts, enabling a broad discussion of stakeholders and organizational goals, as well as in-depth exploration of the foundation of superior long term performance. This book is strongly grounded in contemporary strategic management theory, but it also has a very practical bent. Chapters provide guidance on actually putting the frameworks to use (e.g., steps to conduct an industry analysis, how to do a resource analysis, how to conduct a value chain analysis) along with examples of how to do so. Classroom-tested and peer-reviewed, the author employs a lively and engaging writing style that will appeal to students and instructors alike.
