This book owes its beginnings to the pioneering work of Claude Shannon in 1948 on reliable communication over noisy transmission channels. Shannon's central theme was that if the signaling

Chapter 4 is a good example of this type of coding. In this coding scheme, $k=4$ and $n=5$. As we saw, we have $2^k = 16$ data words and $2^n = 32$ codewords. We saw that 16 out of 32 codewords are used for message transfer and the rest are either used for other purposes or unused.

Chapter 10 Error
Detection and
Correction

This thesis deals with the design of error-control coding schemes for three different problems of noisy information transmission, storage and processing.

These problems have

in common that they are of interest from a practical, industrial point of view and that they cannot be solved elegantly by traditional error-control coding schemes.

Design of error-control coding schemes for three problems ...

bit outdated (lack of all the new development of the 1990's and 2000's, e.g. Turbo code, LDPC code, etc.), it is a good introductory book such that students can build up their foundation for further venture to the error control techniques.
