Any problem that interferes with smell can also interfere with taste. This can reduce the pleasure we have when eating and drinking, which can certainly affect quality of life.

More serious results of both permanent and temporary loss of smell include not being able to smell gas leaks or smoke, or less dangerous but still important smells like a soiled nappy.

Recommend food that leaves its own taste (for example fresh fruit, hard sweets). Add or reduce sugar as appropriate. Reduce the urea content of the diet by eating white meats, eggs, and dairy products. Mask the bitter taste of food containing urea: Add wine or beer to soups and sauces. Marinate chicken, meat, and fish. Use more and stronger seasonings.

Scenario: Halitosis, excessive salivation and altered ...

New loss of smell or taste is a significant and reliable indicator of Covid-19 infection, according to new research published in the journal PLoS Medicine on Thursday, with the study's authors...

taste also affected? Ask the patient to try smelling and tasting foods such as herbs, spices, and coffee and to record their ability to smell and taste in a format such as the home assessment test suggested by AbScent3; this can be repeated after six months to track progress. Many patients with loss of smell will also report loss of taste, however this usually reflects loss of flavour perception as a function of smell, rather than true taste ...

Treatment for lost or changed sense of smell. Your sense of smell may go back to normal in a few weeks or months. Treating the cause might help. For example, steroid nasal sprays or drops might help if you have sinusitis or nasal polyps. A treatment called smell training can also help some people. To find out more about smell training, see:

Lost or changed sense of smell - NHS

Short-term changes in smell and taste are common with infections affecting your upper respiratory tract, like colds and sinus infections. If this is the cause your smell and taste should generally return within two weeks. If you are worried about a persistent change in your sense of smell or taste, you should make an appointment with your GP.

Since the sense of smell usually diminishes due to age, the recovery could take longer and be less than complete for older adults. Savor what you can experience and engage the mind. To reawaken the olfactory nerves, most specialists recommend smell training, a daily routine of sniffing essential oils such as lemon, eucalyptus, cloves, rose, and others.

Residents from East London have been assured of the safety of their drinking water after complaints were received about the taste and smell of water in some parts of the city. The Buffalo City Metro (BCM) responded in a series of tweets by confirming that there was an issue which could be due to the seasonal algae bloom in the dam.
