Following the re-integration
of West Germany into NATO in
the mid-1950s, the
Bundeswehr was equipped with

American tanks under the
Military Aid Program.

Quickly realising they were
not suitable, Germany began
the design of their own main
battle tank in 1956. The
Leopard 1 family of vehicles
became the first fully-

German developed series of armoured combat vehicles to be built after the Second World War, and it owes much to the design concepts developed through combat experience during the latter stages of that war. Using

the German-built version of the British L7 105mm gun for its main armament, the Leopard focused on firepower and with its impressive cross-country performance it was unmatched by most other tank designs of the era. The

left the line in September
1965 and since then Leopards
have seen operational
service in Afghanistan
(Canadian Leopard C2 MEXAS),

Kosovo (KFOR: Danish 1A5-DK;

German Army relinquished its
Leopard 1s, and in 2011 the

From dirt bikes and jet skis
to weed wackers and
snowblowers, machines
powered by small gas engines
have become a permanent—and

R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the

devices that wreak havoc on
it-personal watercraft
(PWCs) on inland lakes and
rivers; all-terrain vehicles
(ATVs) in deserts and
forests; lawn mowers and
leaf blowers in suburbia. In
addition to environmental

impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in

encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's

one irrefutable conclusion:
these machines cannot be
operated without loss of
life and loss of habitat.

In this illuminating history, a senatorial debate about states' rights

exemplifies the growing rift within pre-Civil War America. Two generations after the founding, Americans still disagreed on the nature of the Union. Was it a confederation of sovereign states or a nation

headed by a central government? To South Carolina Senator Robert Y. Hayne, only the vigilant protection of states' rights could hold off an attack on a southern way of life built on slavery. Meanwhile,

Massachusetts Senator Daniel Webster believed that the political and economic ascendancy of New England—and the nation—required a strong, activist national government. In The Webster-

Hayne Debate, historian
Christopher Childers
examines a sharp dispute in
January 1830 that came to
define the dilemma of
America's national identity.
During Senate discussion of
western land policy, the

senators' increasingly heated exchanges led to the question of union—its nature and its value in a federal republic. Childers argues that both Webster and Hayne, and the factions they represented, saw the West as

key to the success of their political plans and sought to cultivate western support for their ideas. A short, accessible account of the conflict and the related issues it addressed, The Webster-Hayne Debate

captures an important moment
in the early republic.
