Symptom management in advanced prostate cancer | GM

MANAGEMENT 1. Pain is common in advanced cancer and non-malignant conditions, and its management can be difficult. 2. Pain is a total, personal experience with physical, psychological, social and spiritual dimensions. Optimal pain management will be compromised if any of these aspects are neglected. Management requires a multidisciplinary approach.

A Guide to Symptom Management in Palliative Care

The most common symptom of advanced cancer is feeling tired. Other symptoms depend on where the cancer is in the body. They might include: feeling or being sick; unexplained weight loss; pain; yellowing of eyes or skin (jaundice)

Treatment such as radiotherapy or chemotherapy might help to shrink or control the cancer, and reduce symptoms. You can also have other medicines to help relieve symptoms, such as taking painkillers. Tell

Cancer Symptom Management 4th Edition

People living with cancer experience a variety of symptoms—such as pain, worry, depression, diarrhea, cough, shortness of breath, nausea, weakness, fatigue, fever, and confusion. Lack of care results in untreated symptoms that hamper an individual's ability to continue his or her activities of daily living.
