Today it is estimated that there are fewer than 5,630 black rhinos left in the wild, and, with poaching sweeping across the continent, the critically endangered black rhinos' last stand may be in north-western Namibia. It is here that Save the Rhino Trust Namibia (SRT) works tirelessly to protect the last, free-roaming population of black rhinos left in the world.

Talking to trackers from Namibia's Save the Rhino Trust, I was told that elephants and many other browsers won't eat euphorbia and this means more food is available for the rhinos when drought has destroyed palatable plants and led to death for some animals. We saw the carcass of an elephant in one of the conservancies, which our guide said had died from starvation caused by drought.

Namibia's Black Rhino Custodianship Program. By Birgit Kötting, READ TIME 10 MINS. In 1993, one nation set out to conserve an iconic species; 27 years later, its success deserves note. Namibia's vision for its black rhinoceros is that by 2030 Diceros bicornis bicornis will be re-established in viable, healthy breeding populations throughout its former range; and that it will be sustainably utilized through photo tourism and conservation hunting.

*Perceptions and histories of black rhino in west Namibia*

Black rhinos are the smaller of the two African rhino species. The most notable difference between white and black rhinos are their hooked upper lip. This distinguishes them from the white rhino, which has a square lip. Black rhinos are browsers rather than grazers, and their pointed lip helps them feed on leaves from bushes and trees.

*Black Rhino | Species | WWF*

The black rhinoceros or hook-lipped rhinoceros (Diceros bicornis) is a species of rhinoceros, native to eastern and southern Africa including Angola, Botswana, Kenya, Malawi, Mozambique, Namibia, South Africa, Eswatini, Tanzania, Zambia, and Zimbabwe. Although the rhinoceros is referred to as black, its colours vary from brown to grey.

Black rhinos are not actually black. They are, however, giant animals with tiny eyes, feet the diameter of laundry baskets, and horns that are prized for both their aesthetic and medicinal qualities. Until recently, these creatures were perched on the edge of extinction, their numbers dwindling as they succumbed to poachers and the ravages of civil war.
